

Micro judgement: Will student prep this lesion or know to monitor.  
What is the most appropriate treatment option for the carious lesion on #30 M?

Short Answer: Monitor and follow up at recall appointments

Rationale for this answer:  
Patient is 26 years old and #30 erupted at 6 years old and the carious lesion occurred when this tooth was partially erupted. There is evidence that this caries has been arrested over a period of time. M
